

- It is complex to print on fleece or French Terry garments.
- Process printing is to be avoided. Prefer regular or vintage imprints (1 to 4 colours) and requiring the least amount of colour as possible.
- The thickness of the garment can create a movement on the printing table and cause slight variations from one print to another, or make some types of printing impossible to produce.
- The thicker the fabric, the more it absorbs the ink. Thus, the colour of the fabric can influence the colour of the ink.

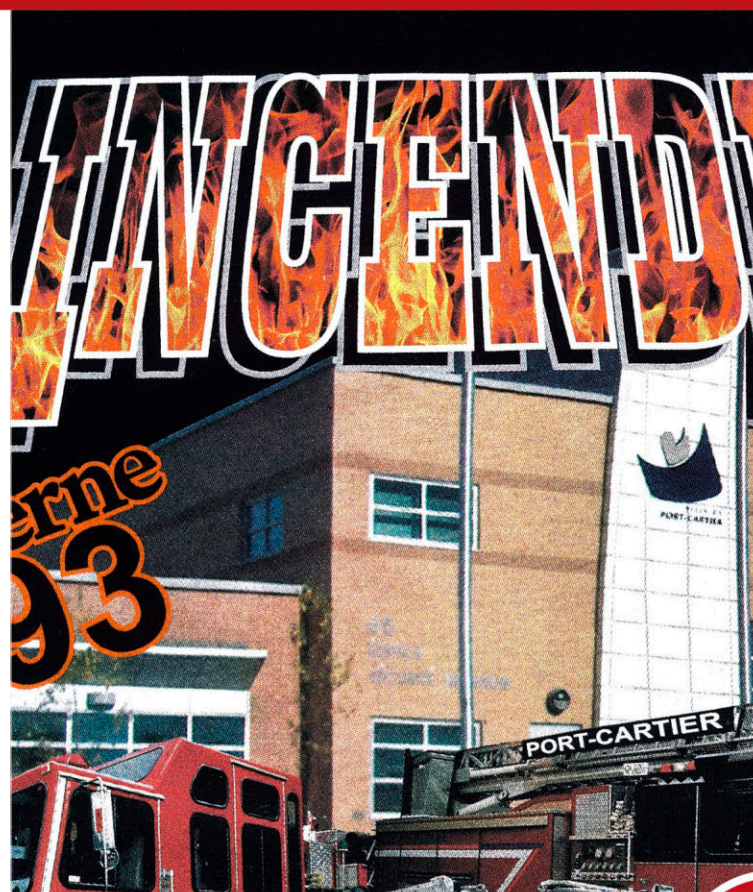

· Printing on French Terry or fleece requires that your logo be processed differently. Thus, if your order includes a batch of jersey clothing and another batch of French Terry or fleece, additional fees may apply but the finished product will have more impact.

· Regular printing on an unlined hood is possible. However, for a lined hood, you must opt for a vintage 1 colour print only. Printing on hoods always involves a surcharge for non-standard location.

Process print is not recommended on French Terry or fleece fabrics. Here are the points to consider if you do so:

- Use Attraction Clothing (Ethica, Initial & MV Sport)
- An evaluation of the project is required by our team.

Regular jersey

French Terry or fleece

VS

Less vibrant colours

White less opaque

Difficult colour alignment

Fine lettering difficult to read
